

Geo Code[®]

Geo Code from TransUnion is a geographical coding product designed to help financial institutions comply with federal regulations such as the Community Reinvestment Act (CRA) and the Home Mortgage Disclosure Act (HMDA).

Geo Code provides specific information needed to report detailed geographical descriptions of your portfolio and lending footprint that may be required by these regulations. It helps streamline the loan process while helping you comply with federal regulations. It is available as an add-on to the TransUnion Credit Report and gives you the option to receive Geo Code data on a current address, future address or both.

LEARN MORE

Contact your TransUnion sales representative or call [844-245-4071](tel:844-245-4071) for further assistance.

FEATURES

- Includes most recent census data
- Information is returned in conjunction with the TransUnion Credit Report, eliminating additional searches within other databases
- Provides FIPS (Federal Information Processing Standard) state and county codes, MSA/MD (Metropolitan Statistical Area/Metropolitan Division) data, census tract data, and latitude and longitude coordinates

INPUT REQUIREMENTS

- Dependent on core products accessed.
Optional element:
future address

Print image
