

Healthcare Payer Solutions

Other Health Insurance Discovery

Find other health insurance coverage for your medical claims—including what other vendors miss.

Other Health Insurance Discovery is an automated eligibility system that uses patented data mining technology with matching algorithms to identify alternative insurance coverage that may cover the cost of your medical claims. By leveraging our proprietary commercial database, the solution is proven to find 1-5% more commercial insurance coverage that standard eligibility services miss. As a result, you can recoup incorrectly paid claims and improve your bottom line.

Get started today with a fast, simple implementation process:

1. Using a secure FTP process, you send us an Input File with member demographics, visit information, and known coverage. The Input File is a comma delimited file that your IT department creates at a frequency you determine.
2. TransUnion processes the Input File and sends you an Other Health Insurance Report containing accounts from your Input File where we found additional verified insurance coverage. The report is delivered as a CSV or Excel file that you can load directly into your system.
3. Within 30 days of receiving the Other Health Insurance Report, you send us an optional Feedback File letting TransUnion know if any alternative coverage records were not valid leads.

BENEFITS OF PARTNERING WITH TRANSUNION:

- **Cost-effective, tailored pricing models:** flexible pricing options designed to align with your financial incentives
- **Find more coverage:** we've recovered over \$1 billion in cash to date for our clients
- **Partner with an industry leader:** as a national insurance clearinghouse, TransUnion has 800+ payer connections covering 98% of U.S. insured lives, and is the largest eligibility submitter in the U.S. with over 100 million a month
